

Unraveling the Story of Type II Diabetes and Its Implications on Bone Health:

A Translational Approach

Brenda J. Smith, Ph.D.

John & Sue Taylor Professor, NSCI, OSU

Friday, Dec. 13th, 12:15-1:15

OSU Center for Health Sciences

Room D107, 1111 West 17th Street, Tulsa

Simulcast to ITLE 143 in Stillwater; Light lunch in Tulsa

At the conclusion of this seminar participants will be able to:

- Understand why osteoporotic-like fractures are now considered a major complication of type 2 diabetes.
- Describe how a translational research approach provides novel insights into the pathophysiology of complex disease states.
- Consider the social and economic impact of a major health event such as hip fracture and the implications for future research.

Seminar Series sponsored by

Center for Family Resilience, OSU-Tulsa
